

Instruction for buying DEEX tokens.

Dear participants of the presale!

Please read this instruction for transferring funds when purchasing DEEX tokens and follow it.

1. Each presale participant must have an account (address) on Ethereum. Tokens are credited to the address on the blockchain Ethereum.

The address must look something like this:

"0xc16cf13922c18de7842374f9baace4489f1d24af" (in your case the characters after 0x will be different. Please make sure that you completely control this address, you have a private key and password for it, and you can send transactions from it, (transfer Ethereum to another address).

2. To purchase tokens you can use one of the following methods:

- Open web page in Google Chrome with the MetaMask plug-in (make sure that MetaMask is switched to MainNet and you are logged in) or open <https://thedeex.github.io> in the Mist Browser <https://thedeex.github.io> and use the interface to buy tokens.

* Simply send the Ethereum to the address of THIS smart contract:

0xc16CF13922C18DE7842374F9Baace4489f1D24AF, and the corresponding number of tokens will be credited to your address (the gas limit should be set to 60000). In most cases the Ethereum client will put out the required amount of gas by itself, but you can check and correct it)

ATTENTION.

Do not send funds from exchanges and exchangers since in this case Ethereum is sent from the address of the exchange or exchanger, accordingly the tokens will receive a stock exchange or an exchanger.

3. To check the number of tokens in your account, click the link <https://etherscan.io/address/0xc16cf13922c18de7842374f9baace4489f1d24af#readContract> , in point 12 (balanceOf) enter the address of your Ethereum account and click the Query button. Then the amount of tokens on your account will be withdraw.

You can also enable the option allowing to display the amount of tokens on your account in your own program in the Ethereum client which supports this function. For this you need to enter the data shown bellow:

address of the contract (token): 0xc16cf13922c18de7842374f9baace4489f1d24af

name or symbol of the token: deex

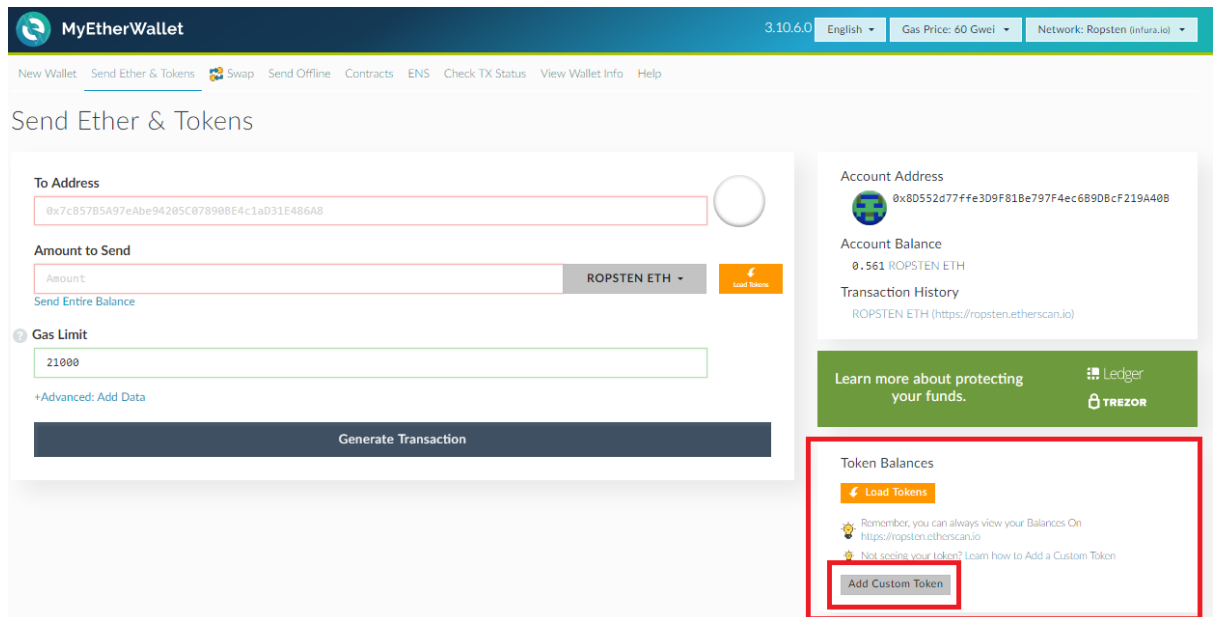

number of decimals: 0

MyEtherWallet

MyEtherWallet

For myetherwallet.com, these parameters must be entered in the lower right corner of the page (circled in a large red rectangle on the screenshot) after a successful login:

1. Click on "Add Custom Token" (the screenshot is circled with a small red rectangle).

2. Enter the following values in the appeared input fields (see screenshot):

Token Contract Address = 0xc16cf13922c18de7842374f9baace4489f1d24af

Token Symbol = DEEX

Decimals = 0

Token Balances

[↶ Load Tokens](#)

💡 Remember, you can always view your Balances On <https://ropsten.etherscan.io>

ADD TOKEN

4. In the open window insert `0xc16CF13922C18DE7842374F9Baace4489f1D24AF` as a "Token Contract Address"

The screenshot shows a web browser window with two tabs: "MyEther" and "Ethereum". The active tab displays a "Main Network" interface. A modal window titled "ADD TOKEN" is open, featuring a back arrow and the following fields:

- Token Contract Address**: `0xc16CF13922C18DE7842374F9Baace4489f1D2`
- Token Symbol**: `deex`
- Decimals of Precision**: `0`

An orange "Add" button is located at the bottom of the form.

5. Click Add button
6. If everything was done correctly, you will see the amount of available tokens.
